DETAILED ACTION

Page 2

Election/Restrictions

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

- Group I, claim(s) 1-13, drawn to an adhesive composition.
- Group II, claim(s) 14-18, drawn to a multilayer film.
- 2. The inventions listed as Groups I and II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: The linking technical feature of the claims is the adhesive composition disclosed in claim 1. However, as noted on the International Search Report, the content of claim 1 is disclosed by at least JP 2001-181375. Thus, the linking technical feature does not define a contribution over the prior art. Therefore, the claims lack a special technical feature.
- 3. This application contains claims directed to more than one species of the generic invention.

 These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

Applicants should elect one of Species 1 and 2 first, and then further elect one of Species 3-5 because Species 1 and 2, while being separate species, are generic to Species 3-5.

The species are as follows:

Species 1, claims 2 and 8, describes a resin having an epoxy resin, a phenoxy resin, and a hardener, wherein the epoxy resin contains (a) a dimer acid modified epoxy resin. If Applicant wishes to elect this species, there are three sub-species—**Species 1A**, **Species 1B**, and **Species 1C**—to choose from: Claim 8 describes three distinct species of dimer acid:

Application/Control Number: 10/562,068 Page 3

Art Unit: 1794

Species 1A:

$$H_3C(CH_2)_4$$
 $CH_7^*CH=CH^-(CH_3)_7COOH$

Species 1B:

$$H_3C(CH_2)$$
 = $CH=CH=(CH_2)$ = $COOH$
 $H_3C(CH_2)$ = $CH=CH=(CH_2)$ = $COOH$

Species 1C:

Species 2, claims 3 and 11, describes a resin having an epoxy resin, a phenoxy resin, and a hardener, wherein the epoxy resin contains (b) a phosphorous-containing epoxy resin. If Applicant wishes to elect this species, there are two sub-species—**Species 2A** and **Species 2B**—to choose from: Claim 11 describes formula (2) having a variable group R that relates to the subspecies as follows:

Species 2A: R is selected from a hydrogen atom and an alkyl group with 1-2 carbons.

Species 2B: R is selected from the two ring structures presented.

Species 3, claims 4-7, describes a resin having an epoxy resin, a phenoxy resin, and a hardener, wherein the phenoxy resin contains a bisphenol F type resin.

Species 4, claim 9, describes a resin having an epoxy resin, a phenoxy resin, and a hardener, wherein the phenoxy resin contains a brominated phenoxy resin.

Species 5, claim 13, describes a resin having an epoxy resin, a phenoxy resin, and a hardener, wherein the phenoxy resin contains a bisphenol A type resin.

Applicant is required, in reply to this action, to elect a species as indicated above to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that

Application/Control Number: 10/562,068

Art Unit: 1794

a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

The following claim(s) are generic: 1, 10, 12, and 14-18.

- 4. The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons:
- 5. Species 1 and 2 differ because (a) a dimer acid modified epoxy resin and (b) a phosphorous-containing epoxy resin are not the same, and would be expected to have different properties.
- 6. The subspecies of Species 1 each differ vastly in chemical structure, and therefore would be expected to present different properties.
- 7. The subspecies of Species 2 each differ vastly in chemical structure, and therefore would be expected to present different properties.
- 8. Species 3-5 differ because a bisphenol-F type resin differs from a brominated phenoxy resin. In turn, a bisphenol-F type resin differs from a bisphenol-A type resin, and so does a brominated phenoxy resin. Therefore each would be expected to present different properties.
- 9. Because of the complexity of the restriction requirement, the examiner did not attempt a telephonic election.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point

Application/Control Number: 10/562,068 Page 5

Art Unit: 1794

out supposed errors in the restriction requirement, the election shall be treated as an election without

traverse.

10. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the

inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named

inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of

inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37

CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should

be directed to John Freeman whose telephone number is (571)270-3469. The examiner can normally be

reached on Monday-Friday 7:30-5:00PM EST (First Friday off).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor,

Callie Shosho can be reached on (571)272-1123. The fax phone number for the organization where this

application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application

Information Retrieval (PAIR) system. Status information for published applications may be obtained from

either Private PAIR or Public PAIR. Status information for unpublished applications is available through

Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should

you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC)

at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative

or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-

1000.
